

Does Conventional Software Need Conventions?

Brian Luzum, Merri Sue Carter
U.S. Naval Observatory

The inclusion of software in past versions of the IERS Conventions has been somewhat inconsistent: as the need for codified models arose, software was generated. As a result, the style of the software generally reflected the diversity of perspectives of the various authors. Some of the more generally accepted tenets of software development are presented along with their potential applications to the current Conventions. Potential future concerns and plans are discussed.
