

Progress Report on CCPR-K4.2017

Hiroshi Shitomi, NMIJ

Participants:

- APMP/ AFRIMETS (3): NMIJ (Pilot), NIM, NMIA
* NMISA withdrew from CCPR-K4.2017 in April 2023.
- EURAMET/COOMET (5): CSIC, LNE, METAS, PTB, VNIIOFI
- SIM (2): NIST, NRC

Updates since the last WG-KC meeting:

At the last WG-KC meeting in September 2023, the pilot lab reported that pre-draft A2 was on hold due to strict restriction of exporting technical data publicly not available, that includes comparison data from other participant NMIs. Unfortunately, the same situation has continued so far, and NMIJ couldn't show any good progress for CCPR-K4.2017.

According to the latest export control operation by AIST, the parent organization of NMIJ, we have strong limitation to internationally distribute technical data for an international comparison under some specific conditions considering recent international situations. The pilot lab is now trying to get the special permission to proceed with the comparison. However, under the current situation, it takes an enormous amount of time and effort to obtain it from the relevant ministries.

Once the export control issue is resolved, we will move on to the next step (pre-draft A2).
