

# *Global Protocol for Community-Scale Greenhouse Gas Emission Inventories*

*An Accounting and Reporting Standard for Cities*

## BIPM Workshop on Global to Urban Scale Carbon Measurements

1 July 2015  
Sèvres, France

Maryke van Staden  
ICLEI – Local Governments  
for Sustainability

[www.ghgprotocol.org/  
city-accounting](http://www.ghgprotocol.org/city-accounting)

# Introducing ICLEI

- **ICLEI - Local Governments for Sustainability (ICLEI).**
- **Global city network** advancing **local sustainability with 17 Offices** around the globe.
- Established in **1990** in New York **by cities, for cities.**
- **Today 1000+ members in 86 countries,** representing **700 million people** - in mega-cities, super-cities, urban regions, large cities, small and medium-sized cities & towns.
- ICLEI offers **process and technical guidance,** supports **city-to-city exchanges** and **represents members and local governments** on climate.

# ICLEI supports local governments

**Political**

**Processes  
and systems**

**Technical**

# Cities' Contribution To Global GHG Emissions

> 70%

of global energy-related  
CO<sub>2</sub> emissions are  
attributable to cities

# A new era ... the GPC era

The **GPC** offers the first, global standard to consistently measure city-level emissions.

## Core Partners and Lead Authors

WORLD  
RESOURCES  
INSTITUTE

**30** years experience in  
promoting sustainability  
worldwide

**14** years of GHG  
accounting standard  
development experience

Represent **>70** largest  
cities from around the world  
committed to implementing  
meaningful and sustainable  
climate-related actions

Represent **>1000**  
local government members  
in 86 countries

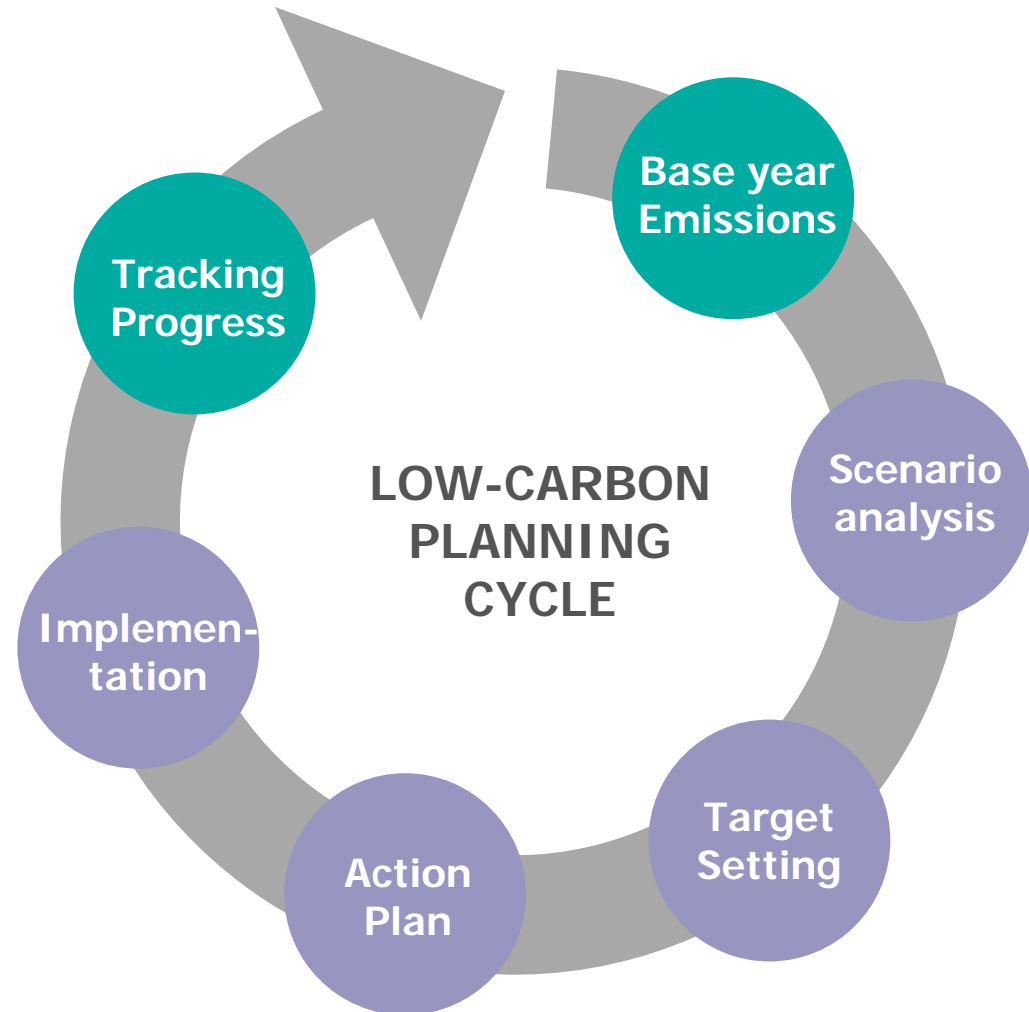

**25** years experience in  
addressing urban  
sustainability issues

# Purpose of the GPC

1. Help cities develop a comprehensive and robust GHG inventory to support **climate action planning**
2. Ensure **consistent** and **transparent** measurement and reporting of GHG emissions between cities
3. Empower city's endeavor in reporting its mitigation performance in **national or international framework**
4. Demonstrate the importance of cities play in tackling climate change, and facilitate insight through **benchmarking**, and **aggregation**, of **comparable data**

# Why Measure Emissions?

- ❖ Establish base year emissions
- ❖ Identify emission sources and reduction opportunities
- ❖ Set target and develop action plans
- ❖ Track progress
- ❖ Benchmarking

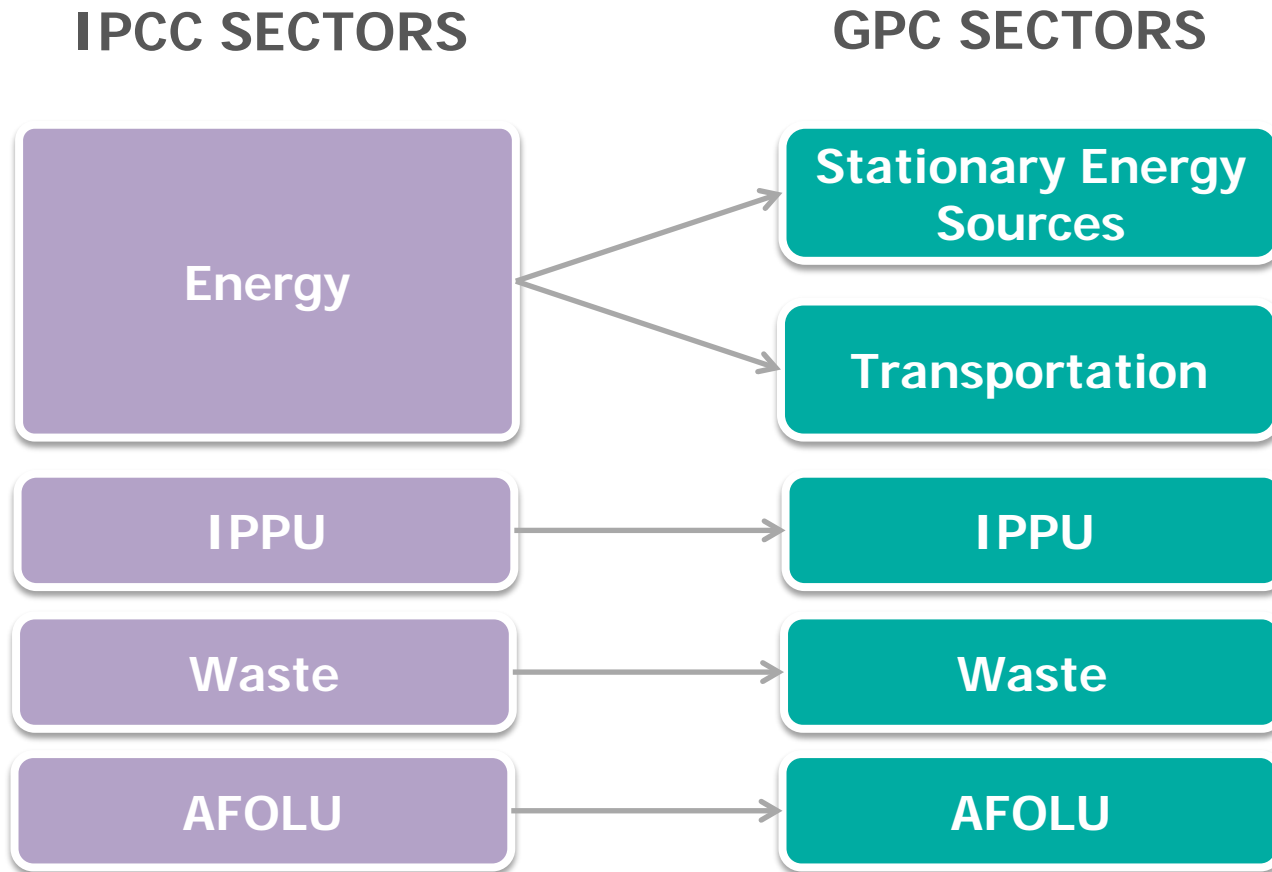

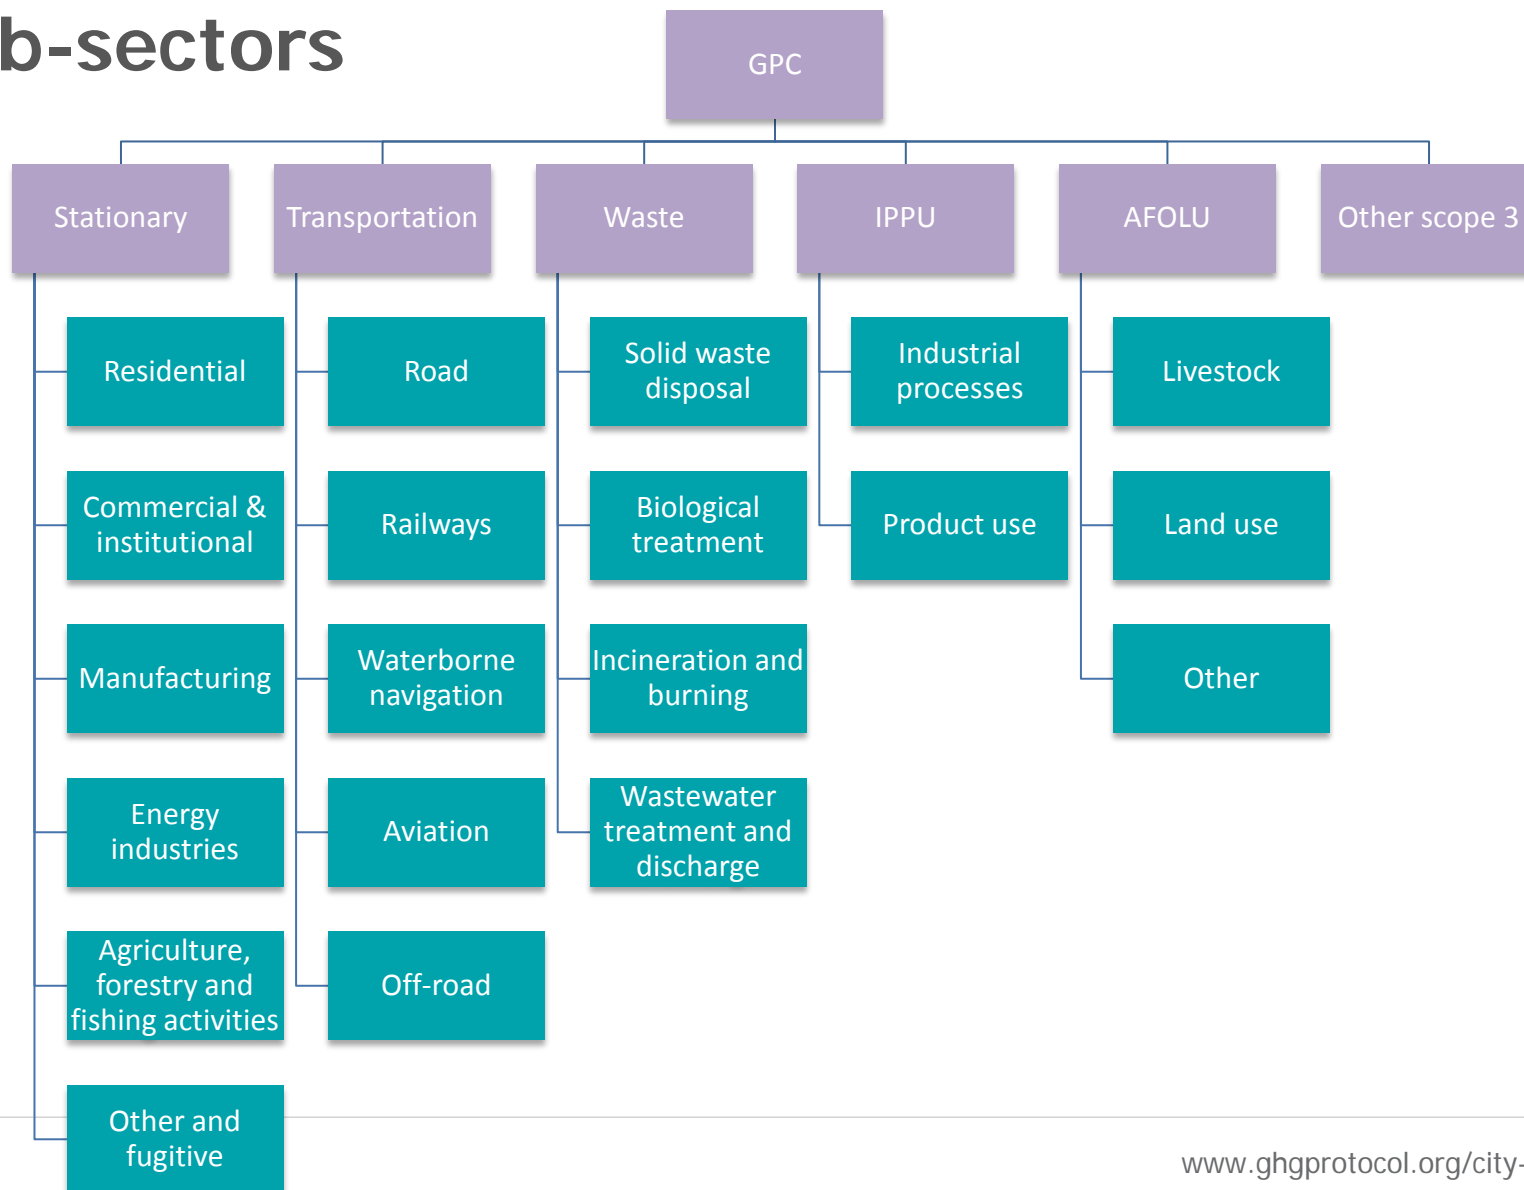

# Greenhouse gases

- Carbon dioxide (CO<sub>2</sub>)
- Methane (CH<sub>4</sub>)
- Nitrous oxide (N<sub>2</sub>O)
- Hydrofluorocarbons (HFCs)
- Perfluorocarbons (PFCs)
- Sulphur hexafluoride (SF<sub>6</sub>)
- Nitrogen trifluoride (NF<sub>3</sub>)

# GHG emission sources

# Sub-sectors

# Reporting requirements

## Assessment boundary

- Geographic boundary and city overview
- Reporting period (12 consecutive months)
- Gases (CO<sub>2</sub>, CH<sub>4</sub>, N<sub>2</sub>O, HFCs, PFCs, SF<sub>6</sub>, and NF<sub>3</sub>)
- Reporting level (Basic/Basic+)

## Emissions reporting

- Cover emission sources required for reporting level
- Emissions disaggregated by gas, source, scope
- Report by gas in metric tonnes of CO<sub>2</sub>e
- Separately report fossil CO<sub>2</sub> from biogenic CO<sub>2</sub>
- Total emissions using two distinct frameworks

## Methodologies & data quality

- Use notation keys (exclusion or partial accounting)
- Data-quality assessment of activity data and emission factors
- Describe methodologies used
- Disclose sources of data (AD, EF and GWP)

# GHG emissions summary

Sector		Total by scope (tCO <sub>2</sub> e)				Total by city-induced reporting level (tCO <sub>2</sub> e)	
		Scope 1 (Territorial)	Scope 2	Scope 3 included in BASIC/ BASIC+	Other Scope 3	BASIC	BASIC+
Stationary Energy	Energy use (all emissions except I.4.4)						
	<i>Energy generation supplied to the grid (I.4.4)</i>						
Transportation (all II emissions)							
Waste	Generated in the city (all III.X.1 and III.X.2).						
	<i>Generated outside city (all III.X.3)</i>						
IPPU (all IV emissions)							
AFOLU (all V emissions)							
Total		(All territorial emissions)				(All BASIC emissions)	(All BASIC & BASIC+ emissions)

Sources required for BASIC reporting

+ Sources required for BASIC+ reporting

Sources included in Other Scope 3

Sources required for territorial total but not for BASIC/BASIC+ reporting (*italics*)

Non-applicable emissions

# Why GPC?

## WITHOUT GPC

Different types of measurements

Account for only a portion of emissions

Unclear if targets will be met

Incomplete data limits investment

Unable to relate to national climate action

## WITH GPC

One measurement

Consistently account for all emissions

Emissions trajectory will be understood

Good data drives investment

Can measure city's contribution to national action

# Assessment boundaries

- ❖ Time period
- ❖ Greenhouse gases
- ❖ Geographic boundaries
- ❖ Emission sources

# Endorsed And Supported By

Cities Alliance Joint Work Program

- 3 Years of development
  - 3 Lead author organizations
  - 29 Advisory Committee Members
  - Input from more than 200 stakeholders, many workshops
  - 35 Pilot testing cities
- 

# 1 Inclusive Global Standard for Community-scale GHG Inventories

# Guided by 29 Advisory Committee Members

## Advisory Committee

1. Pankaj Bhatia, WRI/GHGP (Chair)
2. Seth Schultz, C40
3. Yunus Arikan, ICLEI
4. Stephen Hammer, World Bank
5. Robert Kehew, UN-HABITAT
6. Soraya Smaoun, UNEP
7. Matthew Lynch, WBCSD
8. Sergey Kononov, UNFCCC
9. Kiyoto Tanabe, IPCC
10. Junichi Fujino, IGES/NIES
11. Kyra Appleby, CDP
12. Jan Corfee-Morlot, OECD
13. Maria Varbeva-Daley, BSI
14. Michael Steinhoff, ICLEI US
15. Alvin Meijia, Clean Air Asia
16. Carina Borgström-Hansson, WWF
17. Christophe Nuttall, R20
18. Yoshiaki Ichikawa, ISO
19. Adam Szolyak, Covenant of Mayors

## Special Invitees

### Cities

20. Buenos Aires, Argentina
21. Arendal, Norway
22. London, UK
23. Mexico City, Mexico
24. Tokyo, Japan

### National Governments

25. France (ADEME)
26. Indonesia (NCCC)

### Foundations

27. CIFF
28. Siemens
29. Bloomberg Philanthropies

# Input from 200+ Stakeholders Worldwide

**Beijing**  
April 2013

**Sao Paulo**  
May 2013

**London**  
September 2013

**Dar es Salaam**  
October 2013

**New Delhi**  
December 2013

**Jakarta**  
January 2014

# Pilot Tested by 35 Cities

# Two parallel Reporting Frameworks

## Scope Framework

Comprehensively report all GHG emissions from:

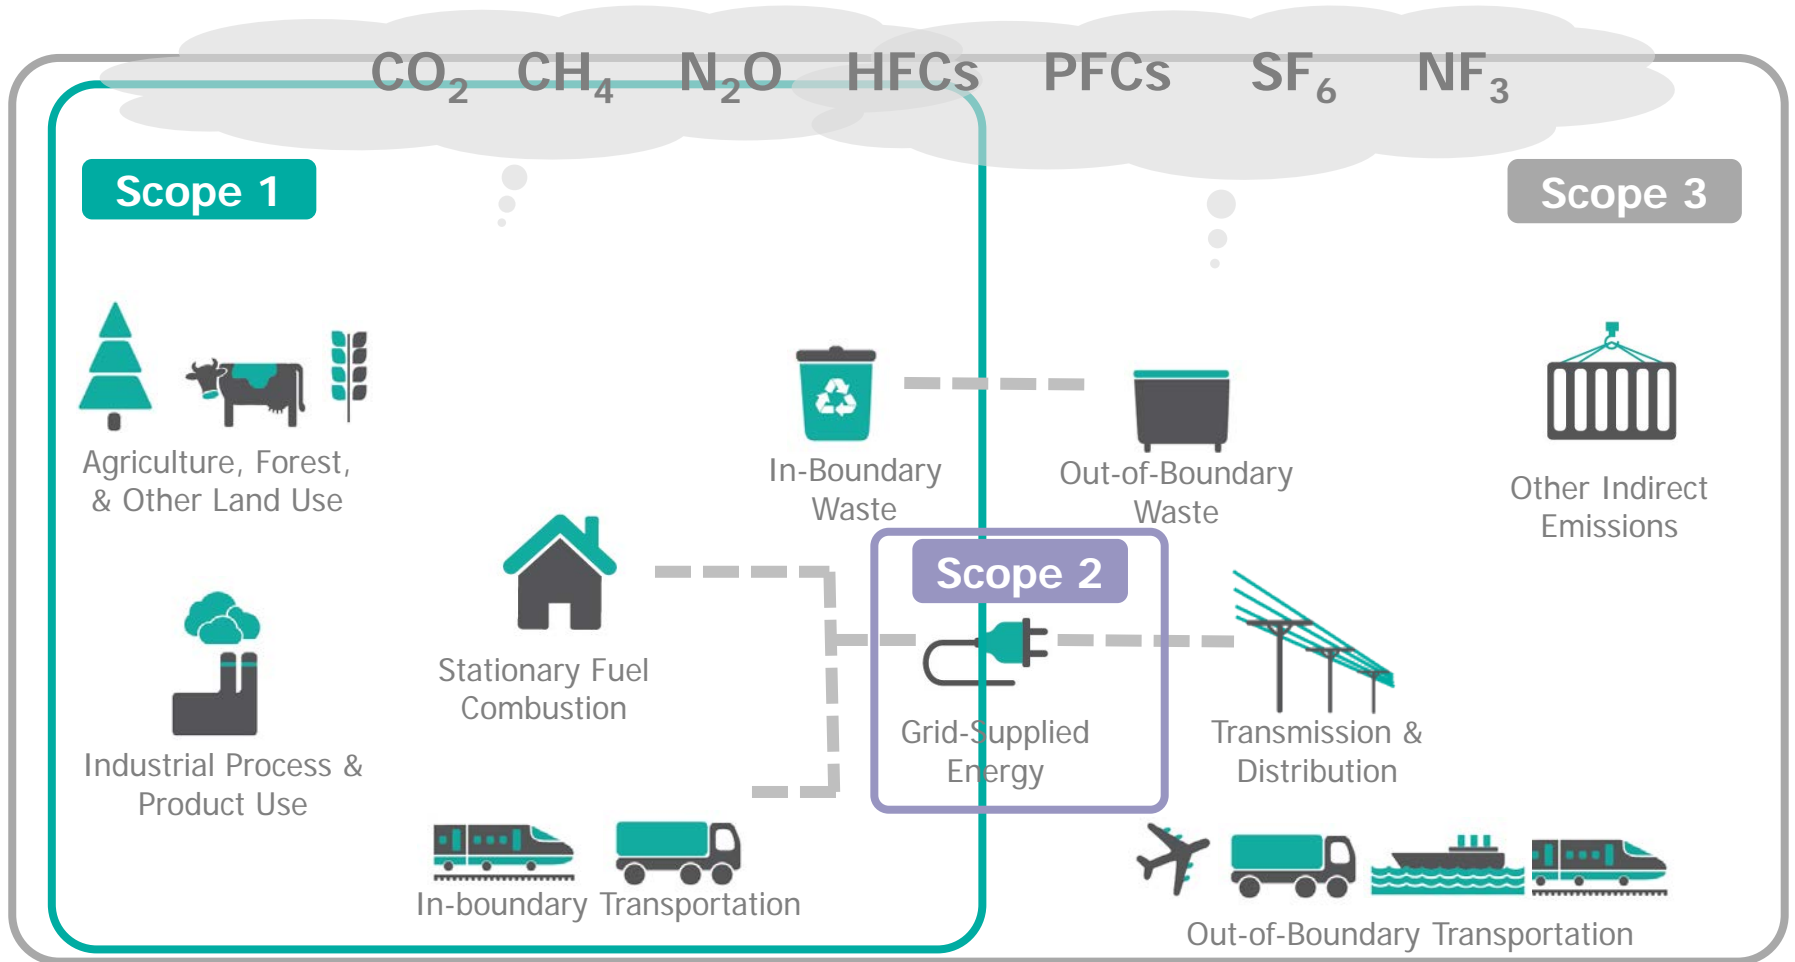

- In-boundary sources (**scope 1**, or “**territorial**”)
- Grid-supplied energy sources (**scope 2**)
- out-of-boundary sources as a result of activities in the city (**scope 3**)

## City-induced Framework

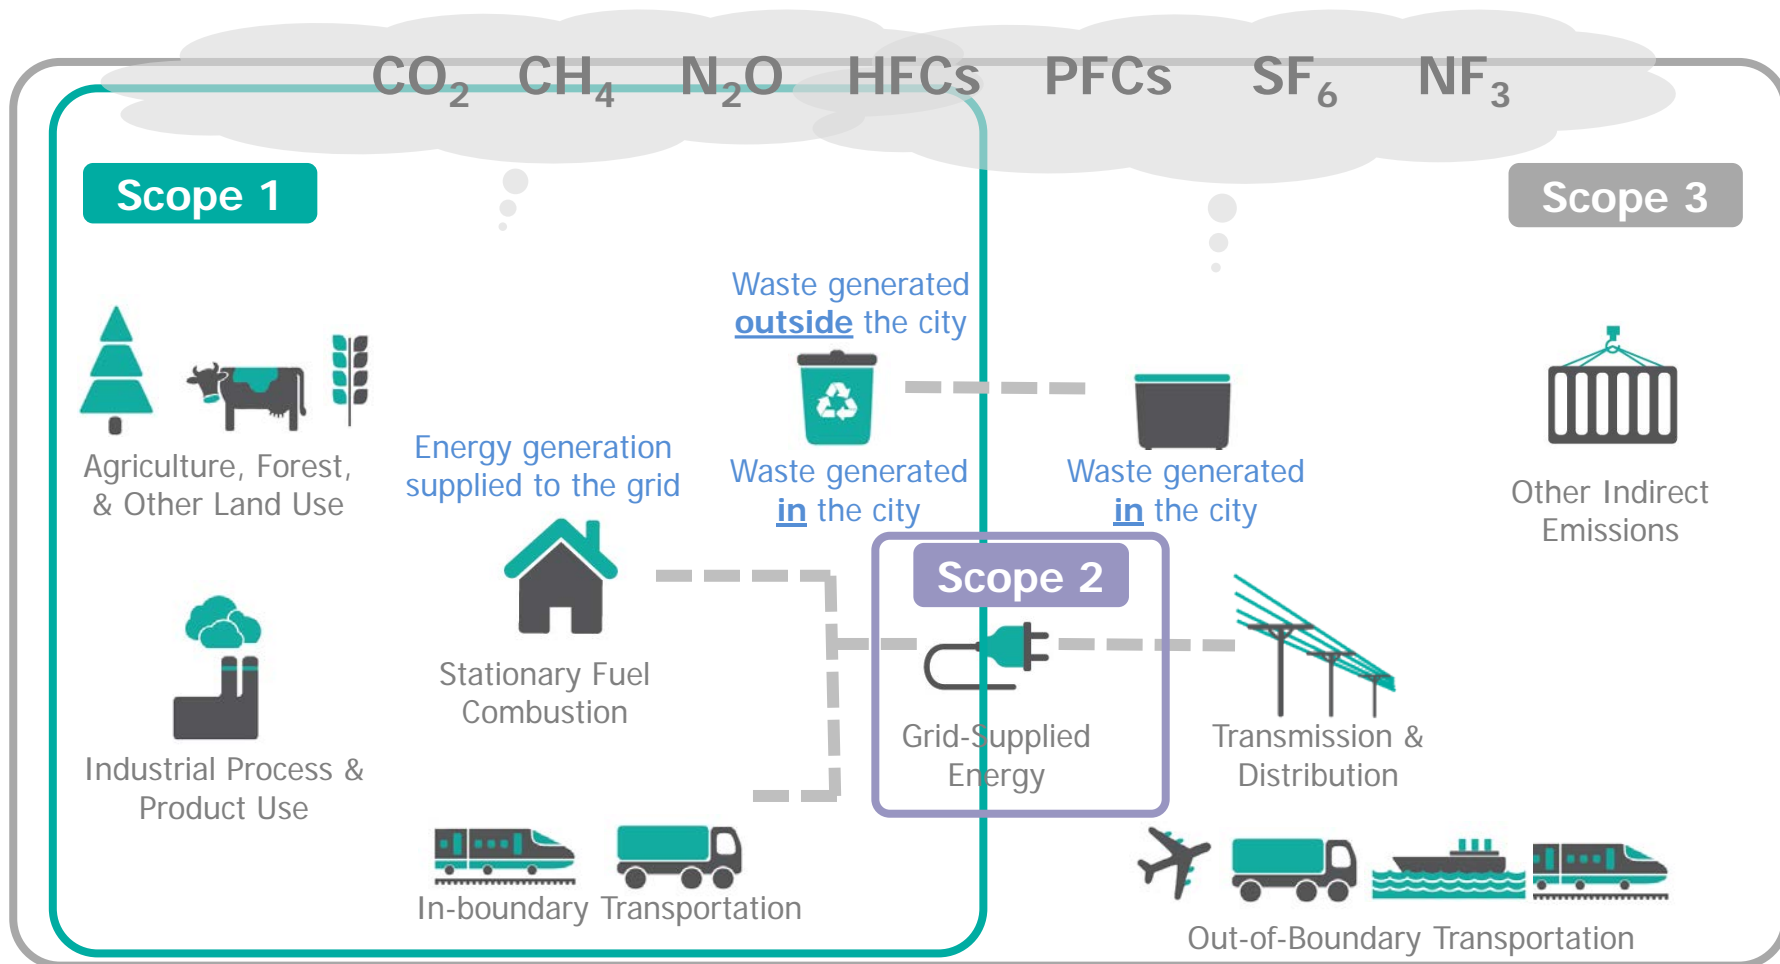

Report only GHG emissions that attributable to activities in the city:

- **BASIC** level reporting:  
Cover sources that occur in almost all cities and where calculation methodologies/data are more readily available
- **BASIC+** level reporting:  
More comprehensive coverage of emissions sources

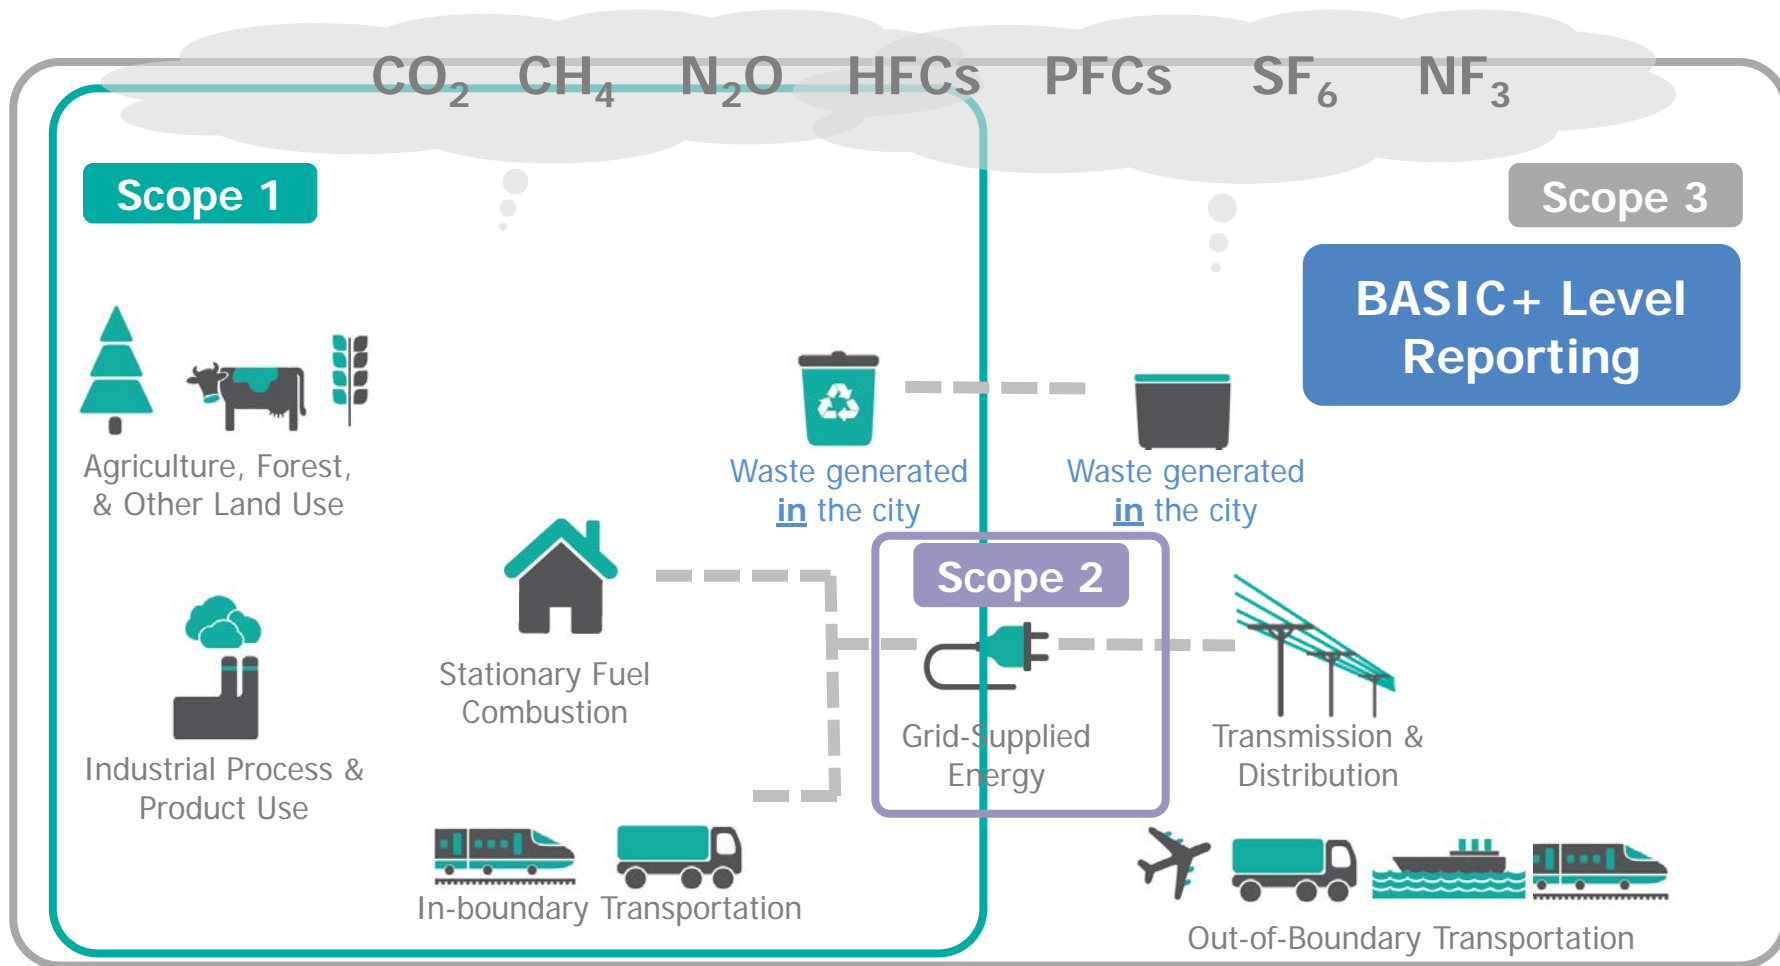

# Scope Framework

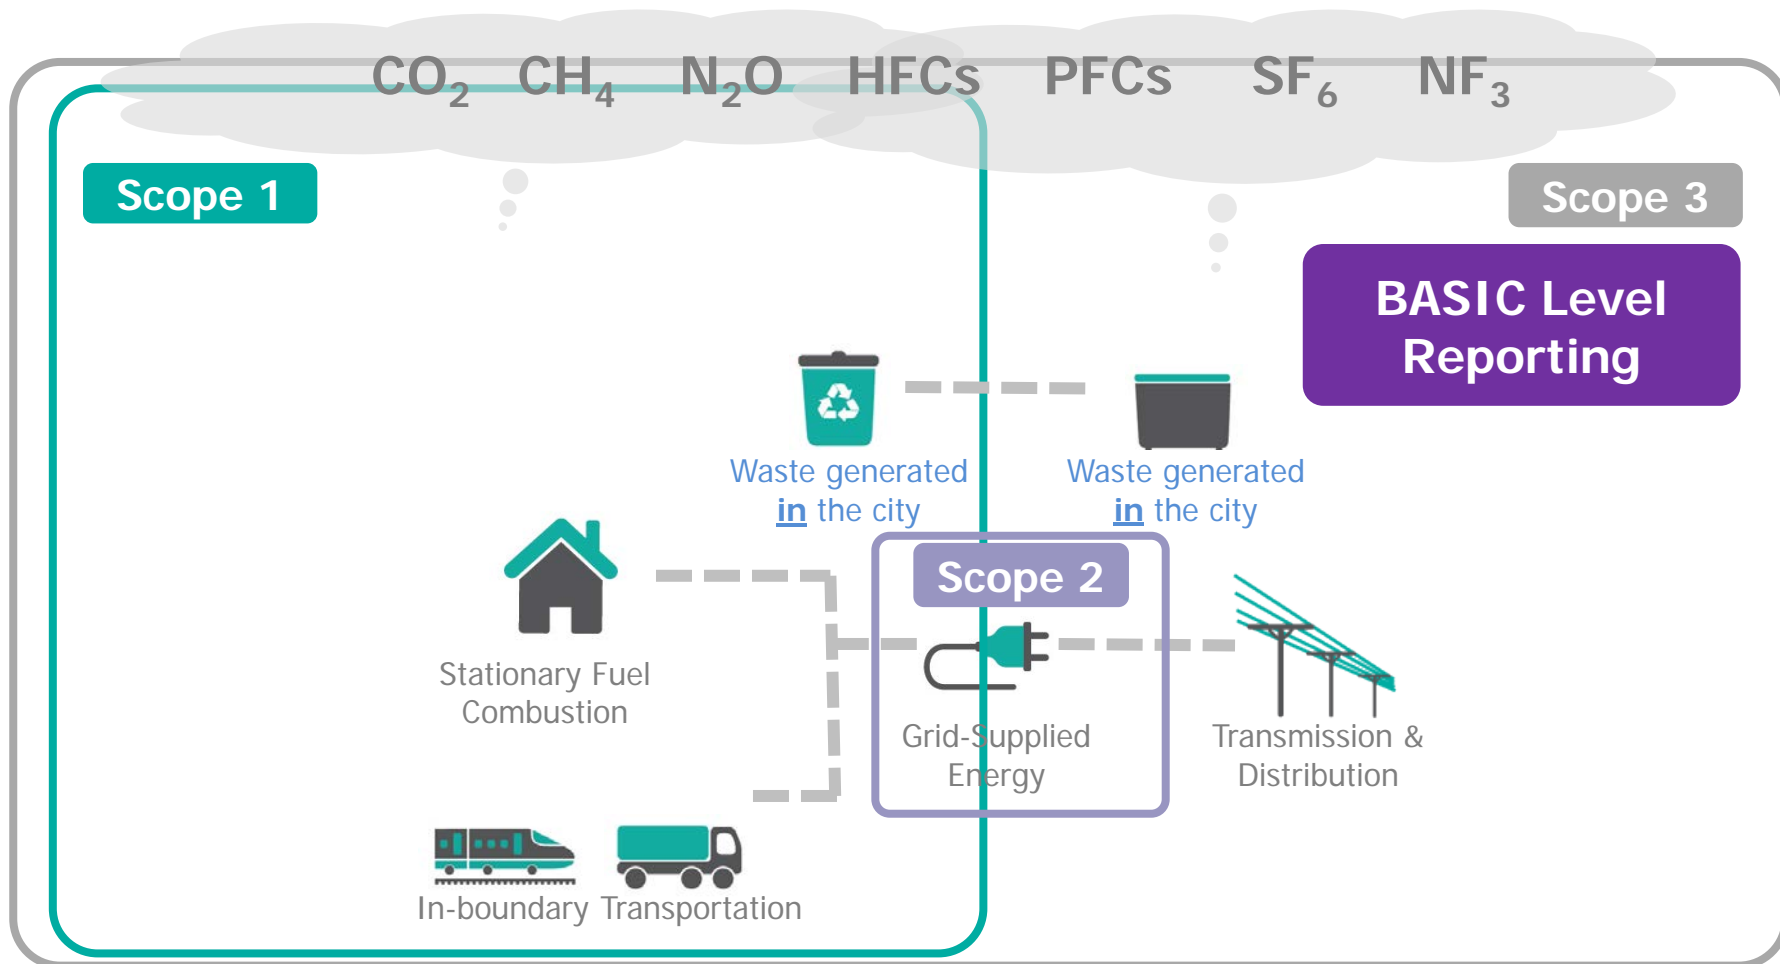

# City-Induced Framework

# City-Induced Framework

# City-Induced Framework

# Key features of the GPC

- ❖ Emphasis on both production and consumption-based emissions
- ❖ Emphasis on boundary issues to separate in-boundary & trans-boundary emissions (to enable data aggregation)
- ❖ Reporting levels and flexibilities (notation keys)
- ❖ Requirements & guidance

# Towards MRV for local climate action

**Global Protocol on  
Community-scale GHG  
Emissions Inventories (GPC)**  
Accounting and reporting guidance

New protocol to  
harmonize  
accounting in  
support of MRV.

**Harmonized Emissions  
Analysis Tools *plus* (HEAT+)**  
Emissions quantification and  
monitoring tool

Conduct regular  
emissions inventories,  
plan Low Emission  
Development

**carbonn Climate Registry  
(cCR)**  
Global reporting platform

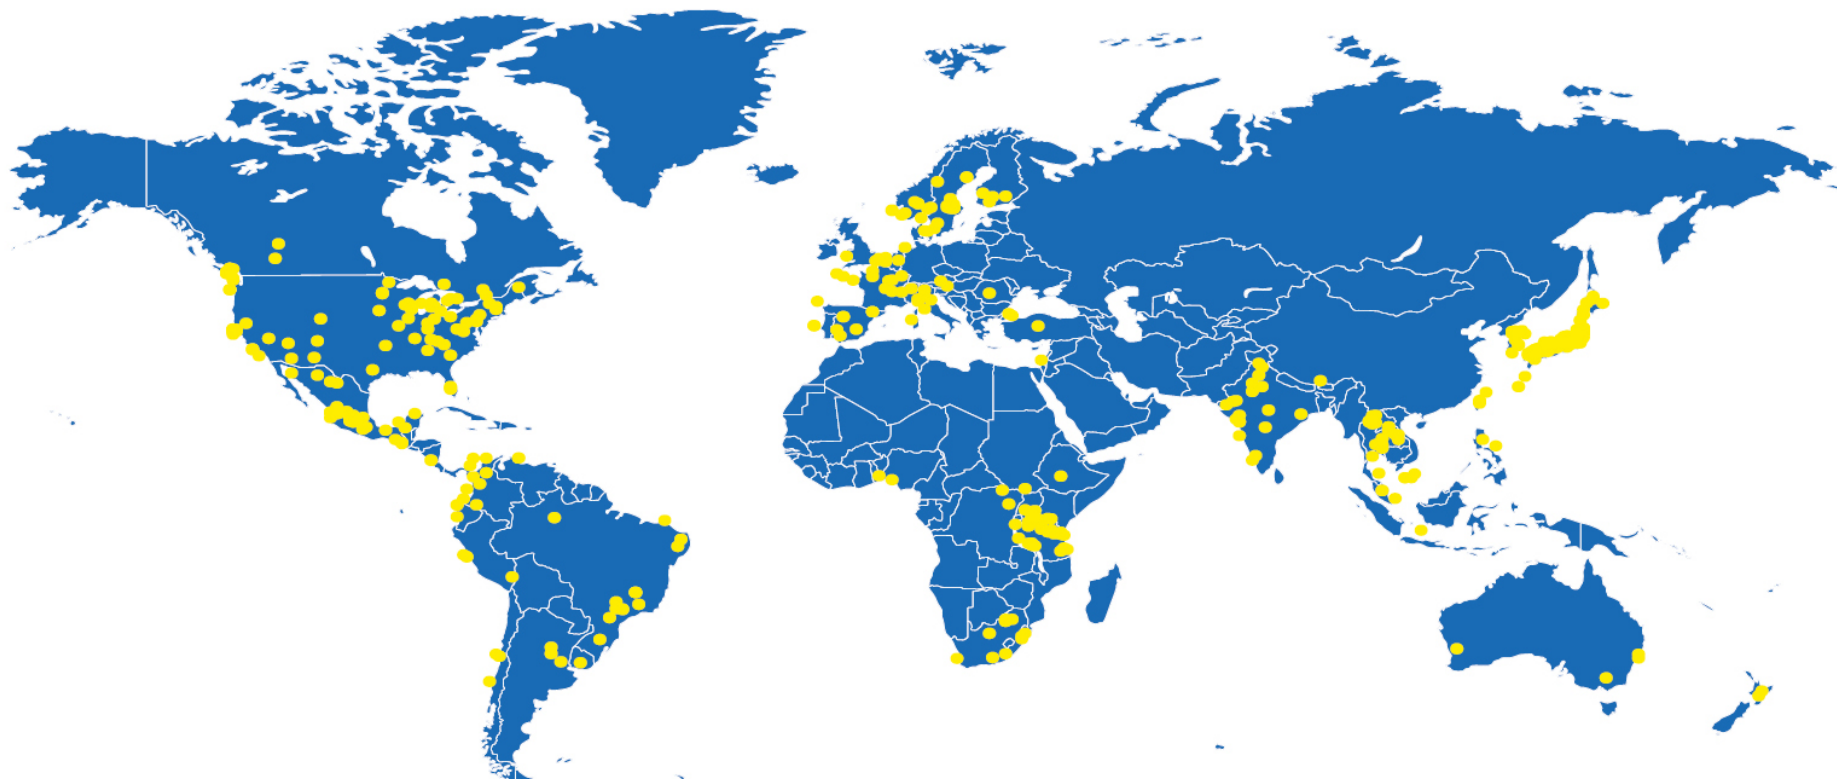

Report commitments,  
performance and  
actions. Supports  
transparency.

# Support package for cities / regions

- Wide range of support available to local and subnational governments:
  - GHG inventory tools that are compliant with GPC (e.g. HEAT+, ClearPath)
  - Global Protocol for Community-scale GHG Emissions Inventories (GPC) – new protocol
  - MRV process for local climate action
  - Global reporting platform for local & subnational climate action (carbonn Climate Registry)
  - Voluntary commitments (Compact of Mayors, ...)
  - Urban Solutions Gateway, Pool of Experts

524

Number of reporting  
cities and regions

50

Countries

480

Population in mil-  
lions  
(15% of world's  
urban population)

1099

Energy and  
climate  
commitments

5201

Reported mitiga-  
tion and adapta-  
tion actions (4013 mitiga-  
tion & 1188 adapta-  
tion actions)

1.0  
billion

Committed GHG  
emissions  
reductions by 2020
