UMR 6203 GEMINI  
Equipe R&D M  
Groupe Temps-Fréquence  
et Transferts de Temps

Françoise Baumont  
Jean-Louis Oneto  
Etienne Samain  
Hervé Viot  
Pierre Claudon  
Robert Dalla (*part time*)

# OCA Geographical Situation

**Observatoire de la Côte d'Azur  
UMR 6203 GEMINI  
R & D M Group**

**Current Studies**

- Satellite Laser Ranging
- Lunar Laser Ranging
- Space Geodesy
- Geodetic GPS
- Time & Frequency

# Time & Frequency Team

## Members

- *Françoise Baumont*
- *Jean-Louis Oneto*
- *Etienne Samain*
- *Hervé Viot*
- *Pierre Claudon*
- *Robert Dalla (part time)*

# OCA Time & Frequency Equipments

## A : Time Station

- Two HP5071A High Performance Clocks
- Comparison System of the 2 Cesium
- Monitoring of Weather Conditions
- TU/TS & Frequencies Distribution over Calern Site

# OCA Time & Frequency Equipments

## B : Construction of real-time UTC(OCA)

*[under test]*

- Trak Systems 6490A MicroPhase Stepper
- Trak Systems 6460 Multiple Time Scale Generator
- Stanford Research SR620 Counter & Racal 1250 Multiplexer for comparison with TTS2 GPS Reference

# OCA Time & Frequency Equipments

## C : Time & Frequency Transfer Techniques

- 1 Single Channel TTR5 AOA GPS Receiver
- 1 Multi-Channel TTS-2 VP Oncore Receiver
- 1 VSAT TWSTFT Station since 1990
- Automated Comparison Systems between Cs Clocks and GPS Receivers

# OCA Time & Frequency Participation to Time Scales

- TA(F) via Free-Running Clock :
  - GPS TTR5 “Common View” with the LNE-SYRTE - Paris
- TAI via UTC(OCA) :
  - TWSTFT OCA-PTB Link
  - GPS TTS2 “Common View” as Backup with the BIPM - Sèvres
  - [scheduled for end of 2005]

# OCA Time & Frequency Presentation of TWSTFT Station

- VSAT 1.80m Diameter
- Anacom Transceiver
- Mitrex Modem
- Operating Everyday in Automatic mode, 12 sessions a day
- Calibration scheduled for Spring 2006, including GPS Receivers

# OCA Time & Frequency Prospective

- T2L2 (Time Transfer by Laser Link) on Jason-2, to be launched in 2008
- OCA will be essential to T2L2 “Time” component, because of its experience as Laser Ranging and Time Transfer Station
- T2L2 will improve the accuracy of current Time Transfer Techniques down to the 60ps level
- ACES & Galileo Participations are planned

# Time Transfert by Laser Link

## T2L2 On Jason 2

GEMINI  
UMR6203

P. Guillemot: System Engineer

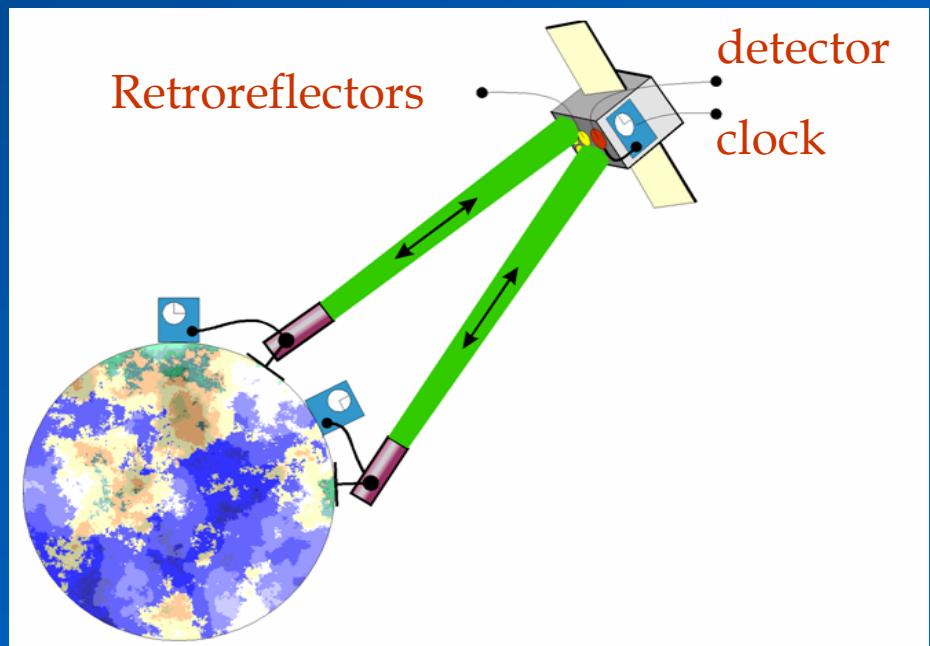

I. Petitbon: Project Manager

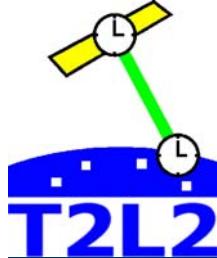

K Gasc : Optic

# Principle

- Time Tagging of laser pulses emitted from a laser station to the satellite
  - Start Time at ground Station  $t_d$  (**ground clock**)
  - Arrival time at satellite  $t_b$  (**space clock**)
  - Return Time at ground station  $t_r$  (**ground clock**)
- Time Transfer between Ground clock and space clock

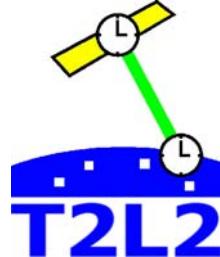

# Scientific Objectives

## Time and Frequency metrology

- Optical Laser Link validation
  - Uncertainty < 100 ps
- Ground clock Synchronization
  - Compatible with the best clocks available in the world
- Time scale participation through calibrations
  - BIPM/CCTF recommendation

# Development plan

- B Phase: start 09/2005 ; end 01/2006
- CD phases : start 01/2006 ; end 11/06
- Jason2 integration : 01/2007
- T2L2 working group constitution 2006
- T2L2 Ground instrumentation 01/2007
- Laser ranging station upgrade : 2008
- Jason2 Launch : 06/2008
- End of exploitation : 2013
