# Acronyms and definitions

## 1. Purpose

The purpose of this document is to provide a list of acronyms and definitions employed in the procedures of the Joint Committee for Traceability in Laboratory Medicine (JCTLM).

#### 2. Contents

| 1.   | PURPOSE   | 1 |
|------|---|---|
| 2.   | CONTENTS  | 1 |

#### **5. Definitions**

#### Certified Reference Material CRM

reference material, accompanied by documentation issued by an authoritative body and providing one or more specified property values with associated uncertainties and traceabilities, using valid procedures, VIM 3rd Ed., 5.14 (2012).

#### Commutability of a reference material

Property of a reference material, demonstrated by the closeness of agreement between the relation among the measurement results for a stated quantity in this material, obtained according to two given measurement procedures, and the relation obtained among the measurement results for other specified materials, VIM 3<sup>rd</sup> Ed., 5.15 (2012).

An example is provided in the Attachment 1 of this procedure, Chart JCTLM-0001.0.

| Acronyms and d |                        |                 |               |                                      |
|----------------|------------------------|-----------------|---------------|--------------------------------------|
| Author: Robert | Date: 18 December 2019 | Authorized :    | JCTLM EXE-G01 |                                      |
| Wielgosz       | Version : 1.1          | JCTLM Executive |               | Accurate results<br>for patient care |

Demonstrating commutability among CRMs with any given measurement process does not assure commutability of any CRM across different measurement processes.

- Consensus...... Group solidarity in sentiment and belief (opinion); operationally, the absence of sustained opposition.
- Extent of equivalence.. An indication of the agreement among measured values of the same quantity assigned to two or more CRMs or ability of different measurement procedures to produce consistent values when used to measure the amount of substance in any given CRM.

The extent of equivalence can be usefully communicated with Youden or Bland-Altman style graphics that include an indication of measurement uncertainty to identify and place differences among the measured values in perspective.

- Higher order ...... The term "higher-order" was left undefined in the IVDD; however, ISO 15193:2009 and ISO 15194:2009 describe the essential requirements for higher-order reference materials and methods.
- ISO Standards ...... Normative standards employed by JCTLM in reviewing and judging suitability for listing materials (ISO 15194), methods (ISO 15193) and procedure-defined measurands (ISO 18153) as being of a higher metrological order (ISO 17511) as required in the European Community In Vitro Diagnostic Directive (EC IVDD) (98/79/EC, Annex1 (A) (3) 2<sup>nd</sup> paragraph) and reference measurement service laboratories (ISO 15195, ISO/IEC 17025:2005).
- JCTLM Criteria.......... Reviewing criteria derived from the applicable international standards for certified reference materials, reference measurement procedures and reference measurement services. Primary standards are from the International Organization for Standardization (ISO).
- JCTLM Database ....... Database of available higher order reference materials, reference measurement methods/procedures and of reference measurement services provided by reference laboratories that are compliant with the JCTLM criteria, website: http://www.bipm.org/jctlm/

JCTLM Database WG Chair

..... Leader of Database WG. The Chair position of the Database WG is held by the Chairman of JCTLM.

JCTLM Database WG vice-chair

- ...... Responsible for an Analyte Group comprising three or more review teams.

JCTLM Executive Committee

List III ...... Certified Reference Materials for nominal properties

Measurand ...... quantity intended to be measured, VIM 3rd Ed., 2.3 (2012).

Measurement principle: phenomenon serving as a basis of a measurement, VIM 3rd Ed., 2.4 (2012).

Measurement method : generic description of a logical organization of operations used in a measurement, VIM 3rd Ed., 2.5 (2012).

Reference measurement procedure:

Measurement procedure accepted as providing measurement results fit for their intended use in assessing measurement trueness of measured quantity values obtained from other measurement procedures for quantities of the same kind, in calibration, or in characterizing reference materials, VIM 3rd Ed., 2.7 (2012)

Reference Measurement Laboratory:

A laboratory that meets the requirements specified in ISO 15195 as a calibration laboratory. Reference measurement laboratories should implement reference measurement procedures and produce results of measurement that are accurate and traceable to national or international primary reference materials when such are available. Whenever possible, traceability should be established to a reference material which forms an embodiment of the SI unit (ISO 17511).

This International Standard may form a basis for the accreditation of a reference measurement laboratory that applies for official recognition of the performance of a reference measurement procedure. Reference measurement laboratories are usually accredited by national accrediting bodies.

RELA Advisor .......... Qualified individual appointed by the Executive Committee to assist the Database WG to review the services nominated for assessment by JCTLM and/or listed in the Database.

#### Attachment 1 Operational Definition of Commutability

Chart ...... Example illustrating the distinguishing difference between a commutable and a non-commutable reference material in two measurement procedures:
Step 1: A series of patient samples, selected to cover the analytical range of the methods, are measured using both procedures. The results are plotted on a scatter-graph and the mathematical relationship between the patient sample results from the two procedures established along with a stated confidence interval on that relationship.
Step 2: The substance amount of the measurand in the certified reference material is measured using the same two procedures. Values from commutable CRMs will lie within the confidence interval found for the patient sample with approximately the same stated confidence. Values from non-commutable materials will lie outside the confidence interval.

WG1-0001.0..... Two Graphical Examples of Commutability Evaluations

Graphs are taken from the presentation given at the JCTLM symposium, Paris, June 2002, by Heinz Schimmel, Institute for Reference Materials and Measurements (Left side) and from Richard R. Miller, Dade Behring using data from Table A2, Clinical and Laboratory Standards Institute, EP9-A2. Confidence interval calculations and formatted graphs were provided by David L. Duewer, National Institute of Standards and Technology.
