

Key comparison CCPR-K2.a

MEASURAND : Spectral responsivity

WAVELENGTH : 900 nm to 1600 nm

The individual measurements of the participating laboratories are given in Section 4 of the CCPR-K2.a Final Report. Examination and correction of the data are explained in Section 5. The data analysis is given in Section 6 and is based on the calculation of the mean relative differences between each participant and the Pilot Laboratory, NIST, weighted by the transfer uncertainty of the measurements of each photodiode, for each wavelength.

For each wavelength, the key comparison reference value is calculated as a weighted mean with cut-off, excluding NMISA and KRISS results (see on page 80 of Section 7 of the CCPR-K2.a Final Report). The value of the cut-off varies with the wavelength and is listed in table 7.17 on page 83 of the Final Report.

The degree of equivalence of each laboratory with respect to the reference value is given by a pair of terms:
 D_i and U_i , its expanded uncertainty ($k = 2$), both expressed in %.

The degree of equivalence between two laboratories is given by a pair of terms:
 D_{ij} and U_{ij} , its expanded uncertainty ($k = 2$), both expressed in %.

Key comparison CCPR-K2.a
