

## Key comparisons CCQM-K1.c, EUROMET.QM-K1.c and APMP.QM-K1.c

### Key comparison CCQM-K1.c

MEASURAND : Amount-of-substance fraction of Nitrogen monoxide (NO) in Nitrogen ( $N_2$ )  
NOMINAL VALUE : 100  $\mu\text{mol/mol}$

$x_i$ : result of measurement carried out by laboratory  $i$

$u_i$ : combined standard uncertainty of  $x_i$

$x_{i,\text{grav}}$ : gravimetric value of the NO amount-of-substance fraction in the cylinder received by laboratory  $i$

$u_{i,\text{grav}}$ : combined standard uncertainty of  $x_{i,\text{grav}}$

Lab $i$	$x_i$ / ( $\mu\text{mol/mol}$ )	$u_i$ / ( $\mu\text{mol/mol}$ )	$x_{i,\text{grav}}$ / ( $\mu\text{mol/mol}$ )	$u_{i,\text{grav}}$ / ( $\mu\text{mol/mol}$ )	Date of measurement
NPL	100.00	0.20	100.070	0.007	96-02
NIST	100.20	0.27	100.090	0.007	95-06
NMi-VSL*	100.10	0.20	100.100	0.007	95-04
BNM-LNE*	100.08	0.04	100.110	0.007	96-01
KRISS	100.90	0.35	100.130	0.007	95-03
NRLM*	100.39	0.25	100.150	0.007	95-03
NRCCRM*	105.80	0.53	100.160	0.007	95-04
VNIIM	101.80	0.50	100.170	0.007	95-04
OMH*	100.70	0.50	100.180	0.007	95-06

\*At the time of the comparison, NMIJ (Japan) was designated as NRLM; VSL (Netherlands) as NMi-VSL; LNE (France) as BNM-LNE; NIM (China) as NRCCRM; and MKEH (Hungary) as OMH.

## Key comparison EUROMET.QM-K1.c

**MEASURAND :** Amount-of-substance fraction of Nitrogen monoxide (NO) in Nitrogen ( $N_2$ )  
**NOMINAL VALUE :** 100  $\mu\text{mol/mol}$

$x_{i-\text{EUR}}$ : result of measurement carried out by laboratory  $i$

$u_{i-\text{EUR}}$ : combined standard uncertainty of  $x_{i-\text{EUR}}$

$x_{i\text{-grav}-\text{EUR}}$ : gravimetric value of the NO amount-of-substance fraction in the cylinder received by laboratory  $i$

$u_{i\text{-grav}-\text{EUR}}$ : combined standard uncertainty of  $x_{i\text{-grav}-\text{EUR}}$

Lab $i$	$x_{i-\text{EUR}}$ / ( $\mu\text{mol/mol}$ )	$u_{i-\text{EUR}}$ / ( $\mu\text{mol/mol}$ )	$x_{i\text{-grav}-\text{EUR}}$ / ( $\mu\text{mol/mol}$ )	$u_{i\text{-grav}-\text{EUR}}$ / ( $\mu\text{mol/mol}$ )	Date of measurement
<b>BNM-LNE*</b>	95.08	0.33	95.070	0.062	02-08
<b>NPL</b>	95.2	0.15	95.094	0.062	02-07

<b>IPQ</b>	95.22	0.20	95.120	0.062	02-07

\*At the time of the comparison, VSL (Netherlands) was designated as NMi-VSL and LNE (France) as BNM-LNE.

## Key comparison APMP.QM-K1.c

**MEASURAND :** Amount-of-substance fraction of Nitrogen monoxide (NO) in Nitrogen ( $N_2$ )  
**NOMINAL VALUE :** 100  $\mu\text{mol/mol}$

$x_{i-\text{APMP}}$ : result of measurement carried out by laboratory  $i$

$u_{i-\text{APMP}}$ : combined standard uncertainty of  $x_{i-\text{APMP}}$

Lab $i$	$x_{i-\text{APMP}}$ / ( $\mu\text{mol/mol}$ )	$u_{i-\text{APMP}}$ / ( $\mu\text{mol/mol}$ )	Date of measurement
NIM	99.07	0.50	Jun 2006
KRISS	97.88	0.11	Aug 2006

Gravimetric value of the transfer cylinder prepared by KRISS: 97.94  $\mu\text{mol/mol}$   
with a standard uncertainty of 0.1  $\mu\text{mol/mol}$ .

## Key comparisons CCQM-K1.c, EUROMET.QM-K1.c and APMP.QM-K1.c

MEASURAND : Amount-of-substance fraction of Nitrogen monoxide (NO) in Nitrogen ( $N_2$ )  
NOMINAL VALUE: 100  $\mu\text{mol/mol}$

### Key comparison CCQM-K1.c

Key comparison reference value: there is no single reference value for this comparison,  
the value  $x_{i,\text{grav}}$  is taken as the reference value for laboratory  $i$ .

The degree of equivalence of each laboratory with respect to the reference value is given by a pair of terms:

$$D_i = (x_i - x_{i,\text{grav}}) \text{ and } U_i, \text{ its expanded uncertainty } (k=2), \text{ both expressed in } \mu\text{mol/mol}$$
$$U_i = 2(u_i^2 + u_{i,\text{grav}}^2)^{1/2}$$

The degree of equivalence between two laboratories is given by a pair of terms:

$$D_{ij} = D_i - D_j = (x_i - x_{i,\text{grav}}) - (x_j - x_{j,\text{grav}}) \text{ and } U_{ij}, \text{ its expanded uncertainty } (k=2), \text{ both expressed in } \mu\text{mol/mol}$$
$$U_{ij} = 2(u_i^2 + u_j^2 + u_{i,\text{grav}}^2 + u_{j,\text{grav}}^2)^{1/2}$$

### Key comparison EUROMET.QM-K1.c

The gravimetric value  $x_{i,\text{grav-EUR}}$  is taken as the reference value for laboratory  $i$  participant in EUROMET.QM-K1.c.

The degree of equivalence of laboratory  $i$  participant in EUROMET.QM-K1.c with respect to the reference value  
is given by a pair of terms:

$$D_{i-\text{EUR}} = (x_{i-\text{EUR}} - x_{i,\text{grav-EUR}}) \text{ and } U_{i-\text{EUR}}, \text{ its expanded uncertainty } (k=2), \text{ both expressed in } \mu\text{mol/mol}$$
$$U_{i-\text{EUR}} = 2(u_{i-\text{EUR}}^2 + u_{i,\text{grav-EUR}}^2)^{1/2}$$

## Linking EUROMET.QM-K1.c to CCQM-K1.c

NMi-VSL acted as the pilot laboratory in both key comparisons, EUROMET.QM-K1.c and CCQM-K1.c. The results of the laboratories having participated in both comparisons (NMi-VSL, NPL, BNM-LNE, and VNIIM) are given in the following table, except those of VNIIM that deviated significantly from the key comparison reference value.

	CCQM-K1.c		EUROMET.QM-K1.c	
	$D_i$ / ( $\mu\text{mol/mol}$ )	$U_i$ / ( $\mu\text{mol/mol}$ )	$D_{i-\text{EUR}}$ / ( $\mu\text{mol/mol}$ )	$U_{i-\text{EUR}}$ / ( $\mu\text{mol/mol}$ )
NMi-VSL	0.00	0.40	0.07	0.32
NPL	-0.07	0.40	0.11	0.32
BNM-LNE	-0.03	0.08	0.01	0.66

Since the results of the three laboratories agree with the reference values within the claimed uncertainties in both comparisons, they provide some validation that the gravimetric values act as valid reference values.

It follows that:

The degrees of equivalence relative to the reference value obtained in EUROMET.QM-K1.c are transferred to CCQM-K1.c without correction:

$$D_i = D_{i-\text{EUR}} \text{ and } U_i = U_{i-\text{EUR}}$$

The degree of equivalence between two laboratories  $i$  and  $j$  participating in CCQM-K1.c or in EUROMET.QM-K1.c is given by a pair of terms:

$$D_{ij} = D_i - D_j \text{ and } U_{ij}, \text{ its expanded uncertainty } (k = 2), \text{ both expressed in } \mu\text{mol/mol}$$

$$U_{ij} = 2(u_i^2 + u_j^2 + u_{i\text{grav}}^2 + u_{j\text{grav}}^2)^{1/2} \text{ with index "}-\text{EUR}" \text{ when necessary.}$$

These statements make it possible to extend the CCQM-K1.c matrix of equivalence to all participants in EUROMET.QM-K1.c

## Linking APMP.QM-K1.c to CCQM-K1.c

In order to link the APMP.QM-K1.c results to those of CCQM-K1.c, a small uncertainty term is added to the uncertainty of the gravimetric value delivered by KRISS for the transfer standard.

The gravimetric value used to calculate the degrees of equivalence is equal to 97.94  $\mu\text{mol/mol}$  with standard uncertainty 0.40  $\mu\text{mol/mol}$ . No pair-wise degrees of equivalence are computed from the APMP.QM-K1.c results.

Full set of degrees of equivalence (with laboratory acronyms as on January 2010)

**CCQM-K1.c, EUROMET.QM-K1.c and APMP.QM-K1.c**  
 Degrees of equivalence for NO in N<sub>2</sub> at nominal value 100 µmol/mol

**Red diamonds** : participants in CCQM-K1.c  
**Green triangles** : participants in EUROMET.QM-K1.c  
**Blue circles** : participants in APMP.QM-K1.c

## Key comparison CCQM-K1.c

MEASURAND : Amount-of-substance fraction of Nitrogen monoxide (NO) in Nitrogen ( $N_2$ )

NOMINAL VALUE : 1000  $\mu\text{mol/mol}$

$x_i$ : result of measurement carried out by laboratory  $i$

$u_i$ : combined standard uncertainty of  $x_i$

$x_{i,\text{grav}}$ : gravimetric value of the NO amount-of-substance fraction in the cylinder received by laboratory  $i$

$u_{i,\text{grav}}$ : combined standard uncertainty of  $x_{i,\text{grav}}$

Lab $i$	$x_i$ / ( $\mu\text{mol/mol}$ )	$u_i$ / ( $\mu\text{mol/mol}$ )	$x_{i,\text{grav}}$ / ( $\mu\text{mol/mol}$ )	$u_{i,\text{grav}}$ / ( $\mu\text{mol/mol}$ )	Date of measurement
<b>NPL</b>	1002.0	1.5	999.77	0.06	96-01
<b>NIST</b>	999.8	2.3	1000.00	0.06	95-06

<b>OMH</b>	1005.0	2.0	1001.20	0.06	95-06

\*At the time of the comparison, NMIJ (National Metrology Institute of Japan) was designated as NRLM (National Research Laboratory of Metrology).

## Key comparison CCQM-K1.c

MEASURAND : Amount-of-substance fraction of Nitrogen monoxide (NO) in Nitrogen (N<sub>2</sub>)  
 NOMINAL VALUE: 1000 µmol/mol

**Key comparison reference value:** there is no single reference value for this comparison,  
 the value  $x_{i,\text{grav}}$  is taken as the reference value for laboratory  $i$ .

The degree of equivalence of each laboratory with respect to the reference value is given by a pair of terms:

$D_i = (x_i - x_{i,\text{grav}})$  and  $U_i$ , its expanded uncertainty ( $k = 2$ ), both expressed in µmol/mol

$$U_i^2 = 2^2(u_i^2 + u_{i,\text{grav}}^2)$$

The degree of equivalence between two laboratories is given by a pair of terms:

$D_{ij} = D_i - D_j = (x_i - x_{i,\text{grav}}) - (x_j - x_{j,\text{grav}})$  and  $U_{ij}$ , its expanded uncertainty ( $k = 2$ ), both expressed in µmol/mol

$$U_{ij} = 2(u_i^2 + u_j^2 + u_{i,\text{grav}}^2 + u_{j,\text{grav}}^2)^{1/2}$$
