

## Key comparison CCRI(III)-K11

**MEASURAND : Fluence per monitor M1-count at 1 m distance from the target in vacuum in  $\text{cm}^{-2}$**

$x_i$  : result of measurement carried out by laboratory  $i$

$u_i$  : combined standard uncertainty of  $x_i$

All measurements were performed from September 2011 to October 2012.

**NEUTRON ENERGY : 27.4 keV**

Lab $i$	$x_i$ $/ (\text{cm}^{-2})$	$u_i$ $/ (\text{cm}^{-2})$	$u_i / x_i$ / %
NPL	1.770	0.059	3.33

## Key comparison CCRI(III)-K11

MEASURAND : Fluence per monitor M1-count at 1 m distance from the target in vacuum in  $\text{cm}^{-2}$

NEUTRON ENERGIES : 27.4 keV, 565 keV, 2.5 MeV, and 17 MeV

For each neutron energy, the key comparison reference value,  $x_R$ , and its standard uncertainty,  $u_R$ , are obtained from the weighted mean of the participants' results.

Neutron energy	$x_R$ / ( $\text{cm}^{-2}$ )	$u_R$ / ( $\text{cm}^{-2}$ )	$u_R / x_R$ / %
27.4 keV	1.752	0.022	1.26
565 keV	2.143	0.028	1.31
2.5 MeV	2.248	0.021	0.93
17 MeV	2.429	0.042	1.72

The degree of equivalence of laboratory  $i$  with respect to the key comparison reference value is given by a pair of terms, both expressed in  $\text{cm}^{-2}$ :  $D_i = (x_i - x_R)$  and its expanded uncertainty  $U_i$  ( $k = 2$ ),  $U_i = 2(u_i^2 + u_R^2)^{1/2}$ .

The degree of equivalence between two laboratories  $i$  and  $j$  is given by a pair of terms both expressed in  $\text{cm}^{-2}$ :

$D_{ij} = (D_i - D_j) = (x_i - x_j)$  and its expanded uncertainty  $U_{ij}$  ( $k = 2$ ),  $U_{ij} = 2(u_i^2 + u_j^2)^{1/2}$ .

The pair-wise degrees of equivalence are not explicitly given here, but can be found in Table A.3.1 to A.3.4 on page 26 and 27 of the Final Report.
