

## CCM.P-K13, APMP.M.P-K13, EURAMET.M.P-K13, and EURAMET.M.P-K7

### Key comparison CCM.P-K13

**MEASURAND :** Effective area  $A'(p', 20^\circ\text{C})$  of piston-cylinder unit DH-Budenberg 4603 mounted in a DH-Budenberg pressure balance model 5306 determined from comparisons against participants primary pressure standards

**NOMINAL VALUE :**  $2 \text{ mm}^2$

$x_i$ : result of measurement of  $A'(p', 20^\circ\text{C})$  taken as the arithmetic average of 10 values obtained by laboratory  $i$  and corrected for drift

$u_i$ : combined standard uncertainty of  $x_i$  as reported by laboratory  $i$  (without including uncertainty of the drift correction)

$u_{\text{DC}}$ : standard uncertainty of the drift correction of  $x_i$

### Key comparison APMP.M.P-K13

The results of the participating laboratories in key comparison APMP.M.P-K13 are given in Section 6 of the Final Report.

Measurements were carried out between 2010 and 2013.

### Key comparison EURAMET.M.P-K13

The results of the participating laboratories in key comparison EURAMET.M.P-K13 are given in Section 6 of the Final Report.

Measurements were carried out between 2009 and 2011.

### Key comparison EURAMET.M.P-K7

The results of the participating laboratories in key comparison EURAMET.M.P-K7 are given in Section 7 of the Final Report.

Measurements were carried out between 2005 and 2007.

## CCM.P-K13, APMP.M.P-K13, EURAMET.M.P-K13, and EURAMET.M.P-K7

### Key comparison CCM.P-K13

MEASURAND : Effective area  $A'(p', 20^\circ\text{C})$  of piston-cylinder unit DH-Budenberg 4603 mounted in a DH-Budenberg pressure balance model 5306 determined from comparisons against participants primary pressure standards

NOMINAL VALUE : 2 mm<sup>2</sup>

The key comparison reference value,  $x_R$ , is calculated at each pressure  $p'$  as the median of the participants' values obtained at this pressure.

The standard uncertainty of the reference value at each pressure,  $u_R$ , is calculated by the formula  $u_R = [(1.858 \times \text{MED}|x_i - x_R|)^2 / (n-1)]^{1/2}$ , where MED is median and  $n$  is number of participants.

For each value of the pressure, the degree of equivalence of each laboratory  $i$  with respect to the key comparison reference value is given by:

$D_i = (x_i - x_R) / x_R$ , the relative deviation from the reference value, and  $U_i = 2(u_i^2 + u_{DC}^2 + u_R^2)^{1/2} / x_R$ , its expanded uncertainty ( $k = 2$ ).

$p'$ / MPa	$x_R$ / mm <sup>2</sup>	$u_R / x_R$ $/ 10^{-6}$
50	1.961152	13.5
100	1.961261	4.6
150	1.961376	3.4
200	1.961486	3.4
250	1.961589	5.4
300	1.961688	5.9
350	1.961780	7.7
400	1.961868	6.7
450	1.961955	8.8
500	1.962041	11.1

### Key comparison APMP.M.P-K13

The results of the participants in APMP.M.P-K13 are linked to those of CCM.P-K13 through the results of the two linking laboratories, NMIJ and NPLI, as explained in Section 7 of the Final Report.

### Key comparison EURAMET.M.P-K13

The results of the participants in EURAMET.M.P-K13 are linked to those of CCM.P-K13 through the results of the linking laboratory, PTB, as explained in Section 7 of the Final Report.

### Key comparison EURAMET.M.P-K7

The results of the participants in EURAMET.M.P-K7 are linked to those of CCM.P-K13 through the results of the linking laboratory, PTB, as explained in Section 9 of the Final Report.
