<b>CSIR-NML</b>	119.20	0.78	118.99	0.05	Dec 00
<b>IPQ</b>	119.65	0.55	119.62	0.05	Nov 00
<b>SMU</b>	118.88	0.30	118.68	0.05	Apr 01

CSIR-NML originally submitted an expanded uncertainty ( $k = 2$ ) of 3.2  $\mu\text{mol/mol}$ . However, an error in the calculation of this uncertainty was identified some time after the report had been submitted. Subsequently, CSIR-NML submitted an amended report containing a corrected value of 1.56  $\mu\text{mol/mol}$ . This change in the value of the uncertainty was approved in the 8th CCQM meeting held on 18 and 19 April 2002.

## Key comparison APMP.QM-K4

**MEASURAND:** Amount-of-substance fraction of ethanol in air  
**NOMINAL VALUE:** 120  $\mu\text{mol/mol}$

$x_{i-\text{APMP}}$ : result of measurement carried out by laboratory  $i$

$u_{i-\text{APMP}}$ : combined standard uncertainty of  $x_{i-\text{APMP}}$

$x_{i\text{-grav-APMP}}$ : gravimetric value of the ethanol amount-of-substance fraction in the cylinder received by laboratory  $i$

$u_{i\text{-grav-APMP}}$ : combined standard uncertainty of  $x_{i\text{-grav-APMP}}$

Lab $i$	$x_{i-\text{APMP}}$ / ( $\mu\text{mol/mol}$ )	$u_{i-\text{APMP}}$ / ( $\mu\text{mol/mol}$ )	$x_{i\text{-grav-APMP}}$ / ( $\mu\text{mol/mol}$ )	$u_{i\text{-grav-APMP}}$ / ( $\mu\text{mol/mol}$ )	Date of measurement
CMS/ITRI	121.27	1.76	121.15	0.184	Nov, Dec 00

CSIR-NML	122.31	0.36	121.72	0.185	Dec 00

CSIR-NML originally submitted an expanded uncertainty ( $k = 2$ ) of 4.1  $\mu\text{mol/mol}$ . However, an error in the calculation of this uncertainty was identified some time after the report had been submitted. Subsequently, CSIR-NML submitted an amended report containing a corrected value of 0.72  $\mu\text{mol/mol}$ . This change in the value of the uncertainty was approved in the CCQM Gas analysis working group meeting held in October 2003.

## Key comparison APMP.QM-K4.1

**MEASURAND:** Amount-of-substance fraction of ethanol in nitrogen  
**NOMINAL VALUE:** 120  $\mu\text{mol/mol}$

$x_{i-\text{APMP1}}$ : result of measurement carried out by laboratory  $i$

$u_{i-\text{APMP1}}$ : combined standard uncertainty of  $x_{i-\text{APMP1}}$

$x_{i\text{-grav-APMP1}}$ : gravimetric value of the ethanol amount-of-substance fraction in the cylinder received by laboratory  $i$

$u_{i\text{-grav-APMP1}}$ : combined standard uncertainty of  $x_{i\text{-grav-APMP1}}$

## Key comparison CCQM-K4

MEASURAND: Amount-of-substance fraction of ethanol in air NOMINAL VALUE: 120 µmol/mol

Key comparison reference value: there is no single key comparison reference value for CCQM-K4  
the value  $x_{i\text{grav}}$  is taken as the reference value for laboratory  $i$  participant in CCQM-K4.

The degree of equivalence of laboratory  $i$  participant in CCQM-K4 with respect to the reference value is given by a pair of terms:  $D_i = (x_i - x_{i\text{grav}})$  and  $U_i$ , its expanded uncertainty ( $k = 2$ ), both expressed in µmol/mol,  
 $U_i = 2(u_i^2 + u_{i\text{grav}}^2)^{1/2}$ .

The degree of equivalence between two laboratories  $i$  and  $j$  participant in CCQM-K4 is given by a pair of terms:  
 $D_{ij} = D_i - D_j$  and  $U_{ij}$ , its expanded uncertainty ( $k = 2$ ), both expressed in µmol/mol,  $U_{ij} = (U_i^2 + U_j^2)^{1/2}$ .

## Key comparison EUROMET.QM-K4

MEASURAND: Amount-of-substance fraction of ethanol in air NOMINAL VALUE: 120 µmol/mol

The gravimetric value  $x_{i\text{grav-EUR}}$  is taken as reference value for laboratory  $i$  participant in EUROMET.QM-K4.

The degree of equivalence of laboratory  $i$  participant in EUROMET.QM-K4 with respect to the reference value is given by a pair of terms:  $D_{i\text{-EUR}} = (x_{i\text{-EUR}} - x_{i\text{grav-EUR}})$  and  $U_{i\text{-EUR}}$ , its expanded uncertainty ( $k = 2$ ), both expressed in µmol/mol,  
 $U_{i\text{-EUR}} = 2(u_{i\text{-EUR}}^2 + u_{i\text{grav-EUR}}^2)^{1/2}$ .

## Key comparison APMP.QM-K4

MEASURAND: Amount-of-substance fraction of ethanol in air NOMINAL VALUE: 120 µmol/mol

The gravimetric value  $x_{i\text{grav-APMP}}$  is taken as reference value for laboratory  $i$  participant in APMP.QM-K4.

The degree of equivalence of laboratory  $i$  participant in APMP.QM-K4 with respect to the reference value is given by a pair of terms:  $D_{i\text{-APMP}} = (x_{i\text{-APMP}} - x_{i\text{grav-APMP}})$  and  $U_{i\text{-APMP}}$ , its expanded uncertainty ( $k = 2$ ), both expressed in µmol/mol,  
 $U_{i\text{-APMP}} = 2(u_{i\text{-APMP}}^2 + u_{i\text{grav-APMP}}^2)^{1/2}$ .

## Key comparison APMP.QM-K4.1

MEASURAND: Amount-of-substance fraction of ethanol in nitrogen NOMINAL VALUE: 120 µmol/mol

The gravimetric value  $x_{i\text{-grav-APMP1}}$  is taken as reference value for laboratory  $i$  participant in APMP.QM-K4.1

The degree of equivalence of laboratory  $i$  participant in APMP.QM-K4.1 with respect to the reference value is given by a pair of terms:  $D_{i\text{-APMP1}} = (x_{i\text{-APMP1}} - x_{i\text{-grav-APMP1}})$  and  $U_{i\text{-APMP1}}$ , its expanded uncertainty ( $k = 2$ ), both expressed in µmol/mol,  $U_{i\text{-APMP1}} = 2(u_{i\text{-APMP1}}^2 + u_{i\text{-grav-APMP1}}^2)^{1/2}$ .

## Key comparison EURAMET.QM-K4.1

MEASURAND: Amount-of-substance fraction of ethanol in nitrogen NOMINAL VALUE: 120 µmol/mol

The gravimetric value  $x_{i\text{-grav-EUR1}}$  is taken as reference value for laboratory  $i$  participant in EURAMET.QM-K4.1

The degree of equivalence of laboratory  $i$  participant in EURAMET.QM-K4.1 with respect to the reference value is given by a pair of terms:  $D_{i\text{-EUR1}} = (x_{i\text{-EUR1}} - x_{i\text{-grav-EUR1}})$  and  $U_{i\text{-EUR1}}$ , its expanded uncertainty ( $k = 2$ ), both expressed in µmol/mol.  $U_{i\text{-EUR1}}$  is computed according to equation 8 of the EURAMET.QM-K4.1 Final Report.

## Linking EUROMET.QM-K4 to CCQM-K4

The range of gravimetric values of the standards used in both comparisons is very small, so both comparisons are referred to the same nominal amount-of-substance fraction of 120  $\mu\text{mol/mol}$ .

**The link between EUROMET.QM-K4 and CCQM-K4 is given by the gravimetric values delivered by NPL for both comparisons.**

The laboratories common to both comparisons are the BNM-LNE, the NPL and the VNIIM. The result of VNIIM deviated significantly from the reference value in CCQM-K4. The degrees of equivalence of BNM-LNE and NPL obtained in both comparisons are given in the following table:

CCQM-K4		EUROMET.QM-K4	
	$D_i$	$U_i$	
	/ ( $\mu\text{mol/mol}$ )	/ ( $\mu\text{mol/mol}$ )	
BNM-LNE	0.81	2.70	-0.94
NPL	0.01	1.00	0.09

Since the results from both BNM-LNE and NPL are comparable with the gravimetric values within their claimed uncertainty in both comparisons, they provide validation that the gravimetric values act as valid reference values.

It follows that:

**The degrees of equivalence with respect to the reference values obtained in EUROMET.QM-K4 are transferred to CCQM-K4 without correction:  $D_i = D_{i-\text{EUR}}$  and  $U_i = U_{i-\text{EUR}}$ .**

## Linking APMP.QM-K4 to CCQM-K4

The range of gravimetric values of the standards used in both comparisons is very small, so both comparisons are referred to the same nominal amount-of-substance fraction of 120  $\mu\text{mol/mol}$ .

The link between APMP.QM-K4 and CCQM-K4 is given by the gravimetric values delivered by NMIJ for APMP.QM-K4 and by NPL for CCQM-K4.

The laboratory common to both comparisons is NMIJ. The degrees of equivalence of NMIJ in both comparisons are given in the following table:

CCQM-K4		APMP.QM-K4	
	$D_i$ / ( $\mu\text{mol/mol}$ )		$U_i$ / ( $\mu\text{mol/mol}$ )
NMIJ	0.28	0.47	-0.14

Since the results from NMIJ are comparable with the gravimetric values within their claimed uncertainty in both comparisons, they provide validation that the gravimetric values act as valid reference values  
It follows that:

The degrees of equivalence with respect to the reference values obtained in APMP.QM-K4 are transferred to CCQM-K4 without correction:  $D_i = D_{i-\text{APMP}}$  and  $U_i = U_{i-\text{APMP}}$ .

## Linking APMP.QM-K4.1 to CCQM-K4

Discussion on the link is given on page 3 of the APMP.QM-K4.1 Final Report. CERI, which participated in CCQM-K4 in the name of NMIJ, acts as the linking laboratory between key comparisons APMP.QM-K4.1 and CCQM.K4.

The degrees of equivalence with respect to the reference values obtained in APMP.QM-K4.1 are transferred to CCQM-K4 without correction:  $D_i = D_{i-\text{APMP1}}$  and  $U_i = U_{i-\text{APMP1}}$ .

The degree of equivalence between two laboratories  $i$  and  $j$ , one and the other participant in any one of the four comparisons CCQM-K4, EUROMET.QM-K4, APMP.QM-K4, and APMP.QM-K4.1 is given by a pair of terms:  
 $D_{ij} = D_i - D_j$  and  $U_{ij}$ , its expanded uncertainty ( $k = 2$ ), both expressed in  $\mu\text{mol/mol}$ ,  $U_{ij} = (U_i^2 + U_j^2)^{1/2}$ .

## Linking EURAMET.QM-K4.1 to CCQM-K4

The range of gravimetric values of the standards used in both comparisons is very small, so both comparisons are referred to the same nominal amount-of-substance fraction of 120  $\mu\text{mol/mol}$ .

The link between EURAMET.QM-K4.1 and CCQM-K4 is given by the gravimetric values delivered by VSL for EURAMET.QM-K4.1 and NPL for CCQM-K4.

The laboratories common to both comparisons are NPL and VSL. Their degrees of equivalence in both comparisons are given in the following table:

	CCQM-K4		EURAMET.QM-K4.1	
	$D_i$	$U_i$ / ( $\mu\text{mol/mol}$ )	$D_{i-\text{EUR}}$	$U_{i-\text{EUR}}$ / ( $\mu\text{mol/mol}$ )
NPL	0.01	1.00	-0.19	0.75
VSL	-0.04	1.20	-0.01	1.06

Since the results from both NPL and VSL are comparable with the gravimetric values within their claimed uncertainties in both comparisons, they provide validation that the gravimetric values act as valid reference values.  
It follows that:

The degrees of equivalence with respect to the reference values obtained in EURAMET.QM-K4.1 are transferred to CCQM-K4 without correction:  $D_i = D_{i-\text{EUR}1}$  and  $U_i = U_{i-\text{EUR}1}$ .

These statements make it possible to extend the CCQM-K4 matrix of equivalence to the full matrix of equivalence involving all participants in CCQM-K4, EUROMET.QM-K4, APMP.QM-K4, APMP.QM-K4.1, and EURAMET.QM-K4.1.

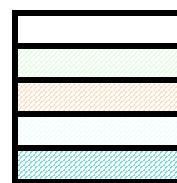

In the following the pair-wise degrees of equivalence are explicitly computed between CCQM-K4 and EUROMET.QM-K4, and inside APMP.QM-K4 and APMP.QM-K4.1. No pair-wise degrees of equivalence involving EURAMET.QM-K4.1 participants have been computed.

No pair-wide degrees of equivalence involving participants in EURAMET.QM-K4.1 have been computed.

**CCQM-K4, EUR.QM-K4 and K4.1, APMP.QM-K4 and K4.1**  
**Degrees of equivalence [ $D_i$ , and expanded uncertainty ( $k = 2$ )  $U_i$ ]**

Ethanol in air: 120  $\mu\text{mol/mol}$

Note: CERI participated in CCQM-K4 and APMP.QM-K4 in the name of NMJ
