NIST	6.8973	0.0005	6.8630	0.0007	6.8406	0.0022	00-01

SMU discovered a calculation error.

The erroneous result is used for computing the degrees of equivalence involving SMU.

The erroneous result is corrected before it is used for evaluating the key comparison reference value.

SMU corrected	6.8970	0.0009	6.8640	0.0009	6.8397	0.0009	00-02
----------------------	--------	--------	--------	--------	--------	--------	-------

A subsequent bilateral comparison was carried out between SMU and PTB in December 2000.

The composition of the measured sample was very similar to that of sample 1.

Measurements were carried out at 15 °C, 25 °C and 37 °C.

PTB(s)	6.9004	0.0011	6.8657	0.0011	6.8422	0.0011	00-12
SMU(s)	6.9014	0.0010	6.8668	0.0011	6.8439	0.0013	00-12

'(s)' means 'subsequent bilateral comparison'.

Key comparison CCQM-K9

MEASURAND : pH value of phosphate buffer
 sample 1: 0.025 mol kg⁻¹ KH₂PO₄ + 0.025 mol kg⁻¹ Na₂HPO₄
 NOMINAL VALUE: pH = 6.9 at 25 °C

The key comparison reference value, pH_R, is obtained as the variance-weighted mean of the results from the participants.
 The standard deviation of the weighted mean is taken as the standard uncertainty, u_R, of pH_R.

Temperature / °C	15	25	37
pH _R	6.8975	6.8633	6.8394
u _R	0.0005	0.0006	0.0006

Temperature / °C	5	10	20	30
pH _R	6.9497	6.9213	6.8781	6.8512
u _R	0.0009	0.0008	0.0007	0.0007
Temperature / °C	40	45	50	
pH _R	6.8360	6.8325	6.8290	
u _R	0.0009	0.0011	0.0015	

The degree of equivalence of each laboratory with respect to the reference value is given by a pair of terms:

$D_i = (pH_i - pH_R)$ and U_i , its expanded uncertainty ($k = 2$), $U_i = 2(u_i^2 + u_R^2)^{1/2}$. Note: this gives a conservative estimate of U_i .

The degree of equivalence between two laboratories is given by a pair of terms:

$D_{ij} = D_i - D_j = pH_i - pH_j$ and U_{ij} , its expanded uncertainty ($k = 2$), $U_{ij} = 2(u_i^2 + u_j^2)^{1/2}$.

Within its uncertainty, the performance of PTB is assumed to be similar in the original full comparison and in the subsequent bilateral comparison between SMU and PTB. Following this bilateral comparison:

- the new degree of equivalence of SMU with respect to the key comparison reference value is

$D_{SMU(s)} = pH_{SMU(s)} - pH_{PTB(s)} + D_{PTB}$ and $U_{SMU(s)} = 2(u_{SMU(s)}^2 + u_{PTB(s)}^2 + u_R^2)^{1/2}$;

- the new degree of equivalence between SMU and any other laboratory j is

$D_{SMU(s)j} = D_{SMU(s)} - D_j$ and $U_{SMU(s)j} = 2(u_{SMU(s)}^2 + u_{PTB(s)}^2 + u_j^2)^{1/2}$.

Linking CCQM-K9.2 results to CCQM-K9 results

The linkage process is detailed in Section 13 of the CCQM-K9.2 Final Report and is based on the performance of the common participants, PTB and VNIIFTRI, in both key comparisons. It leads to the computation of the degrees of equivalence of participants in CCQM-K9.2 only, relative to the CCQM-K9 key comparison reference values, and allows to extend the graphs of equivalence obtained in CCQM-K9 at temperatures 15 °C, 25 °C and 37 °C.

No pair-wise degrees of equivalence involving participants in CCQM-K9.2 only is computed.

Linking APMP.QM-K9 results to CCQM-K9 results

The linkage process is detailed in Section 8 of the APMP.QM-K9 Final Report and is ensured by the performance of SMU, NIM and NMIJ, which participated in APMP.QM-K9 and also in one of the key comparisons CCQM-K9, CCQM-K9 (subsequent) or CCQM-K9.2. It leads to the computation of the degrees of equivalence of participants in APMP.QM-K9 only, relative to the CCQM-K9 key comparison reference values, and allows to extend the graphs of equivalence obtained in CCQM-K9 at temperatures 15 °C, 25 °C and 37 °C.

No pair-wise degrees of equivalence involving participants in APMP.QM-K9 only is computed.

Key comparisons CCQM-K9, CCQM-K9.2, and APMP.QM-K9

MEASURAND : pH value of phosphate buffer, sample 1: $0.025 \text{ mol kg}^{-1} \text{ KH}_2\text{PO}_4 + 0.025 \text{ mol kg}^{-1} \text{ Na}_2\text{HPO}_4$

NOMINAL VALUE: pH = 6.9 at 25 °C
