

Calibrations between SG and OP

d are differential time corrections to be added to $[UTC(SG) - UTC(OP)]$,
and $u(d)$ are estimated uncertainties for the periods of comparisons.

Date	d/ns	$u(d)/ns$	Reference	Note
November 2004	-1.3	7.0	BIPM Report-2008/02	(1)

The uncertainties given in this table are conservative. They are mainly driven by the uncertainty due to the 'round-trip' reproducibility at the OP.
